

Hidden away by trees at the heart of Kabete, this sustainable development named “Kabete Business Park” will consist of a series of pre-fabricated shipping containers and temporary shelters assembled into place. An eatery and commercial spaces will form the ground level while shops adorn the first floor.

The park seeks to be lit entirely by the power of sun without compromising on the light quality and security of the premises. The landscape design also seeks to provide its users with a beautiful visual appeal and an even better environmental quality.
